**Subject:** AQD station ozone exceedances and elevated values  
**Date:** Monday, July 19, 2021 4:46:42 PM

---

Albion and Adam,

Wyoming has been experiencing elevated ozone values that we believe to be caused by long-range transport of wildfire smoke. Elevated values began on July 9 and since then we have recorded 10 AQD exceedances ( and one CastNet exceedance). Once this weather pattern clears, we will be able to give you the details on the stations and their preliminary 8 hour daily maximums.

Please let me know if you have any questions,  
Cara
